

## Initial Project Planning Template

|               |                                       |
|---------------|---------------------------------------|
| Date          | 15 Nov 2024                           |
| Team ID       | 739938                                |
| Project Name  | AI Enabled Candidate Resume Screening |
| Maximum Marks | 4 Marks                               |

### Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create a product backlog and sprint schedule

| Sprint   | Functional Requirement (Epic)     | User Story Number | User Story / Task                                                                                                                                                                    | Story Points | Priority | Team Members                 | Sprint Start Date | Sprint End Date (Planned) |
|----------|-----------------------------------|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|----------|------------------------------|-------------------|---------------------------|
| Sprint-1 | Data Collection and Preprocessing | USN-1             | As a user, I collect the resumes from various job seekers and I can import libraries like spacy, pyresparser, Flask and smtplib                                                      | 2            | High     | B.Akshaya, R.Swathi          |                   |                           |
| Sprint-2 | Feature Extraction                | USN-2             | As a user, I will convert the unstructured data to structured data, identify candidate relevant attributes, facilitate matching with job descriptions                                | 1            | High     | K.Aravind Kumar, R.Pravalika |                   |                           |
| Sprint-3 | Model Evaluation                  | USN-3             | As a user, I will ensure that the AI system performs accurately, fairly, and efficiently when analyzing and ranking resumes. Model evaluation assesses the system's effectiveness in | 2            | Low      | R.pravalika                  |                   |                           |

| Sprint   | Functional Requirement (Epic) | User Story Number | User Story / Task                                                                                                                                                                                                                                                                                                                                                                             | Story Points | Priority | Team Members                     | Sprint Start Date | Sprint End Date (Planned) |
|----------|-------------------------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|----------|----------------------------------|-------------------|---------------------------|
|          |                               |                   | meeting recruitment goals while avoiding errors or biases.                                                                                                                                                                                                                                                                                                                                    |              |          |                                  |                   |                           |
| Sprint-4 | Experimental Design           | USN-4             | As a user, The purpose of experimental design in AI-enabled candidate resume screening is to systematically test and optimize the AI system's performance, ensuring accuracy, fairness, and efficiency. It helps identify the best configurations, detect biases, and validate the system's reliability under real-world conditions, enabling continuous improvement and trustworthy results. | 2            | Medium   | B.Akshaya<br>R.Swathi            |                   |                           |
| Sprint-5 | Model Training and Testing    | USN-5             | As a user, The purpose of model training and testing in AI-enabled candidate resume screening is to develop an AI system that can accurately evaluate resumes and rank candidates based on job requirements. Training allows the model to learn patterns from data, while testing ensures it performs reliably, fairly, and effectively in real-world scenarios.                              | 1            | High     | K.Aravind<br>kumar               |                   |                           |
| Sprint-6 | Iterative improvements        | USN-6             | The purpose of iterative improvements and final evaluation in AI-enabled candidate resume                                                                                                                                                                                                                                                                                                     |              |          | K.Aravind<br>kumar,<br>B.Akshaya |                   |                           |

| <b>Sprint</b> | <b>Functional Requirement (Epic)</b> | <b>User Story Number</b> | <b>User Story / Task</b>                                                                                                                                                                                                                   | <b>Story Points</b> | <b>Priority</b> | <b>Team Members</b>      | <b>Sprint Start Date</b> | <b>Sprint End Date (Planned)</b> |
|---------------|--------------------------------------|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|-----------------|--------------------------|--------------------------|----------------------------------|
|               | and final Evaluation                 |                          | screening is to refine the system by addressing weaknesses and enhancing performance through repeated testing. Final evaluation ensures the model is accurate, fair, and robust, ready for deployment in real-world recruitment processes. |                     |                 | R.Swathi,<br>R.pravalika |                          |                                  |
